

The Biomimetic Endo-Restorative Course

2023. 06. 24.

THEORETICAL Course
with Dr. Andras Forster DMD, PhD

What if we told you that root canal treated teeth do not need posts? In fact they do not need crowns either. With modern adhesive technology and the biomimetic understanding of the dental tissues, substitution of those in a functional way becomes reality. Dr. Forster did not do a post or a crown in the last decade and has had close to 0% restorative failures with endodontically treated teeth. Get to know the concept called BioBlock and how it evolved through our research over the years. Take your endo-restorative practice to a whole new level with this illustrated, practically oriented lecture by the inventor of the short fiber reinforced endodontic core.

LECTURER

Dr. Andras Forster DMD, PhD practices dentistry since 2006. He completed a three year full time residency programme at Szeged University and received a specialisation in Operative Dentistry and Prosthodontics. He continued to teach operative dentistry at the Szeged University as an assistant professor for five more years. He practices as a private practitioner since 2013 and is a restorative dentist at the world famous Urban Regeneration Institute in Budapest since 2016. In 2019 he got his PhD degree for the thesis "Biomimetic Restoration of Endodontically Treated Posterior Teeth". He is passionate to teach biomimetic dentistry and has lectured internationally on the topic. He has several peer reviewed publication including the revolutionary paper on direct short fiber reinforced restoration of root canal treated teeth.

PROGRAMME

9:00-10:30 Anatomy, Histoanatomy and Biomechanics of teeth. Biomechanical and Histological changes after endodontic treatment. Preserving tooth vitality in deep carious lesions.

11:00-12:30 Diagnosing and treating caries and cracks of endo treated teeth. Diagnosing structural compromise. Bonding to radicular dental tissues. The Hierarchy of Bondability and Decoupling with Time.

13:30-15:00 Deep Margin elevation - the ultimate pre-endo restoration. BioBlock and BioBase. BioBlock 2.0

15:30- 17:00 The Substitution of Enamel. Indirect and Direct methods for all situations irrespective of cavity size. Shape, surface, sustainability. Occlusion and stress reduction via occlusal concepts.

17:00-18:00 Discussion

PRICE: 500 Euros - Option for discount together with the Posterior Biomimetic Course on 2022.05.13. (900 Euros for 2 days)

VENUE: Hotel Mercure Budapest City Center - all day catering included
